

ULTRASHIELD BIO-ACTIVE

MAINTAIN

Contains: Patented BIO-FIX MICROBES with unique “cling and digest action” which keep on working - naturally day after day. For maintaining clear, scale free and odour free drains, pipes, toilets, urinals, and u-bends

- Keeps toilets, urinals, u-bends, drains and pipes clear and odour free – without the need for toxic chemicals
- Single, once a week application - which goes on working and saves money
- Removes the need for mechanical rodding/pressure jetting - which is expensive and can seriously damage drains and pipe structures
- Scale, organic waste, fats and cleaner bio-degrade - cuts pollution and disposal costs

UNIQUE BIO-FIX ACTION

UltraShield Maintain is an environmentally friendly biological cleaner, descaler and deodoriser that breaks down and removes fat, grease, uric acid scale (a urine deposit which produces stains and offensive odours) and lime scale from toilets, urinals, drains, washrooms and downstream cold water pipes. **UltraShield Maintain** contains saprophytic, acidophilic microorganisms on a mineral powder support which target scale, organic waste and grease. The organisms are totally safe to animals, humans and the environment. This is patented bio-technology which ‘fixes’ the micro-organisms (over $1/2$ million in every teaspoon) to a prolonged acting powder which clings to drain and pipe surfaces and goes on functioning day after day.

BIO-TECH SCIENCE BREAKTHROUGH

UltraShield drain cleaning products employ unique bio-technology designed to clean without the need for rodding, jetting or harsh toxic chemicals. Natural micro-organisms digest and degrade scale, fat, grease, tartar and organic sulphur compounds into basic mineral elements, water and gas – which then pass harmlessly back into the environment. Bio-degrading the scale, grease and waste matter also removes the causes of blockages (which are expensive to clear) and nasty smells - making **UltraShield Maintain** the ‘one-stop answer’ to most scale, blockage, odour and waste disposal problems.

RECOMMENDED DILUTIONS

Toilets and Urinals

To maintain a clean, odour free and scale free drainage system, dose once a week preferably when usage is light. Apply 20 to 30gms i.e. 1 tablespoon to the drain or toilet at the end of the day. To clear partially blocked pipes apply daily for the first 3 to 4 days.

Surfaces

Moisten the surface and cover the area to be descaled with **UltraShield Maintain**. Leave for 2 to 12 hours if possible and remove scale with a brush or cloth. For heavy deposits repeat as necessary.

NOTES

Keep away from heat and humidity

Keep out of the reach of children

When descaling metal surfaces we suggest you test clean a small area to ensure the metal is not marked after treatment
